Complete Listing of the Claims:

1. -25. (Cancelled)

- 26. (Previously presented) A method of analyzing a target polynucleotide comprising:
- (a) pretreating the surface of a substrate with a polyelectrolyte multiplayer (PEM) to create surface chemistry that facilitates polynucleotide attachment and sequence analysis;
- (b) providing a primed target polynucleotide attached to a surface of a substrate;
- (c) providing a labeled first nucleotides to the attached target polynucleotide under conditions whereby the labeled first nucleotide attaches to the primer, if a complementary nucleotide is present to serve as template in the target polynucleotide;
- (d) determining presence or absence of a signal, the presence of a signal indicating that the labeled first nucleotide was incorporated into the primer, and hence the identity of the complementary base that served as a template in the target polynucleotide;
- (e) repeating steps (c)-(d) with a labeled further nucleotide, the same or different from the first labeled nucleotide, whereby the labeled further nucleotide attaches to the primer or a nucleotide previously incorporated into the primer; and
- (f) repeating step (e) until identities of the bases in a portion or all of the target polynucleotide are determined.

27. – 40. (Cancelled)

- 41. (Withdrawn) An apparatus for analyzing the sequence of a polynucleotide, comprising:
 - (a) a flow cell comprising at least one microfabricated synthesis channel; and
 - (b) an inlet port and an outlet port, said inlet port and outlet port being in fluid communication with said flow cell for flowing fluids into and through said flow cell.
- 42. (Withdrawn) The apparatus of claim 41, furthering comprising a detector to detect a signal from said surface.

- 43. (Withdrawn) The apparatus of claim 42, furthering comprising a light source to illuminate the surface of said synthesis channel.
- 44. (Withdrawn) The apparatus of claim 42, wherein said signal is a fluorescent signal.
- 45. (Withdrawn) The apparatus of claim 42, wherein said signal is an electrochemical signal.
- 46. (Withdrawn) The apparatus of claim 41, wherein said synthesis channel is formed by bonding a microfluidic chip to a substrate.
- 47. (Withdrawn) The apparatus of claim 46, wherein said microfluidic chip further comprises microfabricated valves and microfabricated pumps in an integrated system with said microfabricated synthesis channel.
- 48. (Withdrawn) The apparatus of claim 47, further comprising a plurality of reservoirs for storing reaction reagents, wherein said microfabricated valve and said microfabricated pump are connected to said reservoirs.
- 49. (Withdrawn) The apparatus of claim 41, wherein cross section of said synthesis channel has a linear dimension of less than 100 μ m x 100 μ m, less than 10 μ m x 100 μ m, less than 1 μ m x 10 μ m, or less than 0.1 μ m x 1 μ m.
- 50. (Withdrawn) The apparatus of claim 42, wherein said detector is a photon counting camera.
- 51. (Withdrawn) The apparatus of claim 46, wherein said microfluidic chip is fabricated with an elastomeric material.
- 52. (Withdrawn) The apparatus of claim 51, wherein said elastomeric material is RTV silicone.

- 53. (Withdrawn) The apparatus of claim 52, wherein said substrate is a glass cover slip.
- 54. (Withdrawn) The apparatus of claim 41, further comprising an appropriately programmed computer for recording identity of a nucleotide when said nucleotide becomes linked to a synthesis channel.
